

POLYHOOK STACKABLE BOX (PSB)

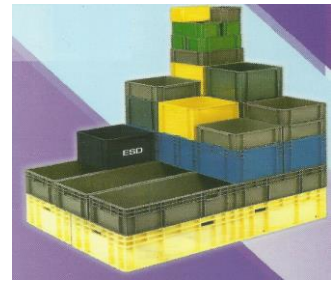

PP CORRUGATED SHEET

NEYCOM BUBBLE SHEET

PP SOLID SHEET

TP POLYBOX

Polyhook Stackable Box (PSB) is an improved version of PP corrugated stackable box. Different from the original design, where the polyhook frame is used at 2 length sides of the box, in the new version, the polyhook frame is used at all 4 sides of the box, which means the durability and the life span of the box is now further improved.

Stop the hazard & headache!

Thin frame with weak reinforcement?

Weak point after riveting?

Frame curved after high temperature under the sun?

Frame lifted up easily?

Polyhook frame is insert from side of the box instead of traditional top insert, it grip firmly to the box and will not lift up even you carry the box by holding the frame! The polyhook frame is thicker and do not required extra rivets that will weaken the frame. This means your boxes will be more durable & eventually save your money!
